

Appl. No. 09/766,027  
Amdt dated March 7, 2006

**Amendments to the Specification:**

Please replace the amended paragraph at line 4 on page 3 of the above-identified application which was submitted in the prior amendment dated November 3, 2004 with the following amended paragraph:

One example of a software tool for use in a personal computer is an audio conferencing tool described in "vat--LBNL Audio Conferencing Tool", published May 1996 and available at ~~www.nrg-ee.lbl.gov/vat~~ www.nrg-ee.lbl.gov%vat. The packets generated by this tool conform to the Real-Time Transport Protocol (RTP) as described in "RTP: A Transport Protocol for Real-Time Applications", Network Working Group, January 1996, which is available from the Internet Engineering Task Force (IETF) website as Request for Comment (RFC) 1889, ~~www.ietf.org/rfc/rfc1889.txt?number=1889~~ www.ietf.org/rfc/rfc1889.txt?number=1889. RTP provides end-to-end network transport functions suitable for applications transmitting real-time data, such as audio, video, or simulation data, over multicast or unicast network services.

Please replace the amended paragraph at line 25 on page 8 of the above-identified application which was submitted in the prior amendment dated November 3, 2004 with the following amended paragraph:

One goal of the system administrator of a computer network is to limit unauthorized outside access to the computer system. The system administrator starts with a completely closed system (i.e., no outside traffic is allowed in) and opens up a number of ports to allow access for web traffic and Telnet access. TCP port 80 is the port number commonly assigned by system administrators for incoming web traffic. Other port numbers may be used for File Transfer Protocol (FTP) and Telnet access. The system administrator obtains these commonly assigned port numbers from industry guidelines which suggest which port numbers should be used for a particular use. The Internet Assigned Numbers Authority (IANA) houses the many unique parameters and protocol values necessary for operation of the Internet and its future development. These parameters and protocol values may be

Appl. No. 09/766,027  
Amdt dated March 7, 2006

Please replace a paragraph beginning at line 19 on page 11 of the above-identified application with the following amended paragraph:

Port 5004 is recommended by the RTP RFC standard for UDP transmission, RFF 1890, RTP Profile for Audio and Video Conferences with Minimal Control, January 1996, ~~www.ietf.org/rfc/rfc1890.txt~~ www.ietf.org/rfc/rfc1890.txt. However, as stated above, the chosen number does not matter as long as the number is fixed across the private branch exchange system. The User is usually not authorized to change this number. The firewall administrator is usually the only one authorized to open a hole at this chosen port number.
